

Key Takeaways from the ALB Keynote Panel

Asia's Digital Asset Hub: Risks and Opportunities in Transforming Hong Kong's Financial Landscape

Retail Investors

Retail investors will trade virtual assets even if not regulated. It is better therefore to permit and regulate retail trading for the benefit of retail investors.

HK & Switzerland

Hong Kong and Switzerland are both well-recognised international financial hubs and both offer robust regulatory regimes for trading in virtual assets.

Security Token Offering

Native security tokens that represent legal title to bonds eliminate the need for third-party bond custodians, mitigating intermediary risks. Tokenized bonds offer investors better protection by providing a direct, secure, transparent and efficient way of recording and registering bond ownership and transfers.

Many thanks again to our keynote panel speakers.
